

TiLite Pilot

Ready for take off

permobil

My chair is so fast
my friends have
to run to keep up.

— Wyatt

Optimal rear
wheel access

Built in
forward growth

Ready to grow

The TiLite Pilot has built-in forward growth adjustment to grow with your child and provide optimal rear wheel access from the very beginning. This gives kids the most efficient propulsion possible without needing to adjust or relearn their push mechanics. The TiLite Pilot lets kids cruise their world like never before.

Designed to move

The clean frame design features a seat pan and side panels that provides easy access for adjustments, making changes simple and intuitive. Unlike on other chairs, all of these adjustments can be done with little or no compromise to rear wheel access.

Easy to use wheel locks are within reach

Frame designed for maximum stability

Lightweight for easier transport

Cleared for landing

The ultra-lightweight design and carbon fiber frame panels make it 50% lighter and a breeze for kids to navigate all the adventures of their great big world. Quick release wheels and transit tie downs mean that bringing the pilot everywhere is also simple for mom and dad.

Specifications
